NREMT Multiple Response Practice! The new exams have a lot of multiple response items. Get some practice with the question style. Reminder that Limmer products are updated for all the new question styles! 5. Vital Sign Trends (5-part Series) Pathophysiology is a big part of the NREMT at every level. How well do you understand pathophysiology? This short series looks at the ways the body compensates for shock, how that affects vital signs, what happens when the body can no longer compensate for shock, and how to use all this information with your patients (or on a test question). Bonus Playlist: What's up with all the new NREMT question types? We review all the new question styles, what they mean, and how to practice them. NOTE: The new questions were originally rolled out in 2024 for ALS exams, and include build a list, option box, drag and drop, and clinical judgment scenarios for AEMT and paramedic exams. Starting April 7, 2025, drag and drop, option box, and build a list items will be scored on BLS exams too. (If you see them on an EMT exam before April 7, they're pilot items.) EMT, AEMT & Paramedic Sample Questions Made by the NREMT! Straight from the horse's mouth. The NREMT created short sample tests for all candidates to familiarize themselves with the new question styles (TEIs). Please note, per the NREMT's intro page on these tests: These sample items are intended solely to introduce you to the different types of items you may see in the certification examination. They are not a substitute for studying. None of these sample items will appear on the actual examination. Photo By: Aaron Smith Used with permission via Creative Commons 2.0 Updated for 2021! In most states, the process for certification in the EMS field involves the National Registry. The Registry is a testing body that provides a standard of testing and many states use this body as a way to certify that an individual is qualified to possess an EMT or Paramedic level medical license in that state. If you are considering a career in the field of Emergency Services then you will most likely need to familiarize yourself with the NREMT Exam. What does NREMT stand for? The acronym stands for the National Registry of Emergency Medical Technicians and embodies all levels of the profession from Medical First Responder all the way to the level of Paramedic. The NREMT is an organization that validates the training of EMS personnel and a benefit of belonging to this Registry is that in many cases it allows for easy transfer of licenses between states that use the Registry as their preferred validation method. What does the NREMT exam entail? Gone are the days of a standard paper test with a preselected bank of test questions. The NREMT is now a CAT or Computer Adaptive Test. Candidates will be subjected to between 75 and 140 questions. These questions are drawn from banks that cover varying areas of EMS knowledge. Prospective EMTs and Paramedics should expect to receive testing on but not limited to Anatomy, Trauma, Respiratory, Obstetrics/Gynecology, Cardiology, and Acute Abdominal Illness and Injury. Paramedic candidates are also tested on their knowledge of Pharmacology. Each question starts at an average difficulty and then adjusts depending on if the question was answered correctly or incorrectly. After the candidate answers enough questions to determine competency in a subject area the CAT switches to a new subject area and the process starts anew. The length of the test also varies. Some candidates only are given 75 questions while others take the entire 140. It is completely dependent on how many right answers are given. For instance: an EMT prospect who really knows their material can pass the tests with minimal questions, while someone who is not prepared at all can also fail at 75 questions. Most people taking the exam will fall between the 75 and 140 question allotment. The exam is difficult and many candidates do not pass during the first attempt. Most future EMTs pass the second or third time through. However, it should be noted that the Registry has a three-strikes rule. If a prospect fails the exam three times then they have to repeat the entire class before they will be allowed to retest. The testing fee is also paid every time the EMT takes the test. Considering the testing fee ranges from \$65 to \$110 depending on what level the candidate is testing at, it is advantageous for the person testing to pass the exam the first time through. At the end of this page, there will be resources listed to aid in passing the first time. However, while aids help the best strategy is always diligent studying and learning the material. Treat this exam as if a loved one's life depends on it because EMS personnel are involved in taking care of someone's loved ones in real life or death situations. The test is serious and the study habits of those taking it should be as well. Candidates should ask themselves: How qualified do I want an emergency person to be if they were treating my mother or father, brother or sister? The second part of the exam is a practical skills evaluation. The purpose of this portion of the exam is to test the knowledge of EMTs to be in simulated real-life scenarios. Candidates should become very familiar with the skill sheets that will be provided during class. Those looking for a sneak peek can find copies of the sheets at the NREMT website. These sheets are for Medical First Responders, EMT-Basics, and EMT-Paramedics. While a number of skills seem overwhelming at first, repetition leads to perfection, and by the time candidates are prepared to take the NREMT Psychomotor portion of the Registry the skills will be like second nature. In the field, EMTs do not have the luxury of thinking about how they should apply oxygen or perform CPR. The training takes over and they just act. The practical examination is meant to simulate real-world scenarios. Candidates that fail the practical portion of the Registry exam only need to retest on the station they failed out on and do not have to retest the CAT (Computer Adaptive Test) portion. Once again, however, if a candidate fails the psychomotor test 3 times then they are required to repeat the entire EMT class before they will be allowed to retest. They will also have to repeat the CAT portion as well. The National Registry of Emergency Medical Technicians exam is a challenging test of the candidates' knowledge and skill. It is difficult to pass. However, given the nature of the work that EMS personnel perform, a difficult test is necessary to ensure quality and well-trained emergency personnel are on the road. Diligence and a working knowledge of the EMS field are required to pass this test. Here are 33 Proven Tips to Pass the NREMT Exam. What to do leading up to the NREMT Exam. 1. Use Test Simulation Software! Photo By: UBC Learning Commons Used with permission via Creative Commons 2.0 The NREMT Exam is a computerized test. It adjusts the difficulty of the questions based on how the test taker is doing. This can be intimidating to think about (at least it was for me). One of the biggest pieces of advice my instructor gave me was to take as many practice tests as possible. Practice tests allow the EMS student to get a sneak peek on how the registry will be formatted. There are a couple of ways to accomplish finding practice tests. One way is to use good old-fashioned Study Guides. The upside is they are relatively low cost and easy to order from places like Amazon or at brick and mortar stores such as Barnes and Noble. They are also portable, students can bring them on daily errands and study on the go. However, the drawback of these study guides is the fact that they are static. They will lead to just memorizing answers and this is not a good way to learn. The NREMT does not draw from the same test bank as study guides. It is recommended that a student looks for an online testing company that has a huge bank of questions. This will allow the best possible chances of getting questions that are close to the registry style of questions. For test simulation software I recommend Exam Edge. Exam Edge is an industry-leading exam preparation company that has been supplying hopeful professionals with practice exams since 2006. They are BBB Accredited and offer practice exams for all levels of NREMT exams. These tests simulate questions that a candidate is likely to encounter when they sit for the live exam. Visitors to Exam Edge can take a free sample test to see if they like the software. Exam Edge does not require any software to be installed and every answer contains detailed explanations of why it is right or wrong. Isn't it better to be prepared for a test that will decide your immediate future? Visitors to this site have an opportunity to save 10% if they use promo code SAVE-CJ10 when shopping for your NREMT Healthcare Certification Exam simply by following this link. I do receive monetary compensation by recommending this product. However, I would not recommend Exam Edge unless I felt that taking practice tests would benefit future EMTs. 2. Listen to music Focus at Will is a scientifically formulated music streaming service. The tracks played are based on neuroscience and have been proven to increase productivity. I have used this service for about 2 years now and it helps me greatly in my study habits. Studying for me and others like me is not the easiest at times. Here is a personal story. As a kid, I grew up with ADHD. This is an attention killer. Even as an adult there are times I find it difficult to stay focused to study. Something is always grabbing my attention. One of the best ways I found to study (for me anyway) is to listen to some sort of non-vocal music. It helps me zone in on what I am reading. Granted this does not apply when I am reviewing audio notes. However, I used this technique to pass my classes at U of M as well as throughout my Paramedic class. Business Insider and Tech Crunch, as well as many other press platforms, have given this service a thumbs up in their reviews, saying that it definitely improves focus and concentration. How Focus@Will Works: The results of an EEG (electroencephalographic) or brainwave study show that Focus@Will audio tracks tune people's brains to frequencies associated with sustained, task-focused attention and thought (read the study results). They saw a greater than 200-400% increase in focus time with Focus@Will. This was based on a survey of 22,000 of their most active users. Focus@Will saw dips in usage over the weekends, this means that subscribers are using Focus@Will primarily during work hours, and is a key measure of whether the system works. Focus@Will asked their users to rate their productivity during each session, and they found that the average productivity in a one-hour Focus@Will session is 75% this is far above the productivity most people report in an hour without Focus@Will. Disclaimer: I am recommending this product because I use it and has been a HUGE boost to my ability to study and my productivity. However, by recommending this product I will receive monetary compensation if you continue to use the product after its trial period is over. > Click on my link or the Banner Above to Get Started
