Who can have laser hair removal?It's really important to book in for a consultation prior to having a laser hair removal treatment at your chosen clinic to find out if the treatment is both safe for you to have and for you. At the Brighton Laser Clinics branch, I had an in-depth consultation with Smith, who assessed my medical records as well as my hair color and skin type. Thankfully, I was suitable for treatment. In fact, I was the ideal candidate, as my hair is so dark and I have fair skin. Smith explained that it's important for your hair to have pigment in order for the laser to treat it. The contrast of dark hair and light skin means that the laser also easily finds the follicles that we want to target. If you have fair hair, however, this treatment is not suitable for you. "The laser cannot do white, gray, or blonde hair, and some kinds of auburn hair that have a transparent look to them. The same goes for vellus hair (or peach fuzz) on the face. The hair must have pigmentation in order for the laser to work," explains Smith.So what about different skin tones? Laser Clinics use a device called Candela GentleLase Pro, which means all skin tones on the Fitzpatrick scale can be treated, from very deep skin to very fair skin tones. In other clinics, you may find that the devices they use cannot treat certain skin tones. At Laser Clinics, your treatment suitability is down to the pigment in your hair follicles rather than your skin tone.During the consultation, it's also important to raise your medical history and any medications you are currently taking or breastfeeding. Laser hair removal is not recommended during pregnancy, and fluctuating hormones can also affect hair growth, which may affect the results of your laser hair removal treatment. However, if you become pregnant midway through your treatment, Laser Clinics will freeze your treatment plan so you can resume treatment when you're ready to come back. As for medication, it's important to flag anything that you're taking as well as any changes to your medical history. Some medications can cause light sensitivity or hormonal fluctuations, which can affect your treatment or suitability to be treated (more on that ahead).What areas can be treated with laser hair removal?Really, the question should be what areas can it not treat? From underarms to bikini line and full Hollywood to full legs, there are so many areas that can be treated with laser hair removal. The same goes for areas on the face. Areas such as the chin and upper lip can be treated as well as between the eyebrows and on the neck. There are also packages for full body or bundles of the most popular areas that can make treatment more cost-effective. The only caveat is that tattooed areas cannot be treated.Is laser hair removal permanent?What I appreciated most about my consultation with Smith is that she was genuinely upfront about the results I might see. While I might not see permanent hair removal, I can expect to see an 80% to 85% reduction in my hair after a full course of treatment. Any hair that remains will also be finer and slower to grow back, which makes shaving much easier and quicker—a major plus. Of course, this will vary from person to person and is also dependent on the area being treated.The reason that laser hair removal isn't totally permanent is that our hormones can continue to create new hair follicles after the treatment is finished. This is particularly so for areas such as the bikini line or chin, as fluctuating hormones can create new hair growth. This is why it's recommended to have a top-up every couple of months for any area that you are having treated to keep that new hair growth at bay. This leads us to how many treatments are required.How many laser hair removal treatments are required?At Brighton Laser Clinics, your therapist will draw a grid on to your legs and treat each area one at a time to ensure a thorough treatment.On average, you will need to have between 10 and 14 sessions over the course of treatment (that's one session every four weeks or so). However, more hormonally affected hair (such as the genital area, underarms, and chin) may be more stubborn to treat and require additional treatment, and you may need top-ups after your initial course of treatment is complete. At around the sixth treatment, you may only need to come in every six weeks, and your therapist will be able to discuss how your treatment is going and how often you're needing to shave. At around the 10th treatment, this is the ideal time to assess how well the treatment is working and whether you may need additional sessions.The reason so many treatments are needed is because hair grows in different cycles, Smith tells me. So at any given time, some of the hairs on your body will be in their growing phase, while others will be in the shedding phase. These phases alternate, which is why you need a treatment around every four to six weeks to ensure you've targeted all of the follicles when they are in their growth phase. That being said, once you have completed a full course of treatment, you may only need to do a top-up a couple of times a year to maintain your results. Smith says that some of her clients can go without shaving for weeks after their treatments and forget what it was like to have to shave all the time—something I can definitely get on board with.How to find a good laser hair removal clinic:The laser hair removal treatment room at Brighton Laser Clinics.You'll want to research the best clinics that are local to you, read reviews, and ensure you ask plenty of questions during your initial consultation and ask if you are suitable for the treatment. A good clinic or therapist will turn you away if they know the treatment will not deliver the results you are looking for. Any good clinic will be happy to share its credentials in terms of qualifications, machinery used, and safety processes.It's also important to consider if you can easily get to the clinic, as you'll need to visit every month or so for the next year during your course of treatment.Does laser hair removal hurt?Pain tolerances vary from person to person, but having tried the treatment myself across several treatments now, I can tell you that the pain is extremely minimal. I'd liken it to a short burst of heat pinching the skin. Thankfully, the laser hair removal machine in Laser Clinics has a cooling tip, which helps to minimize the heat that can cause an uncomfortable sensation.How do you prepare for a laser hair removal treatment?There are a couple of important things to note to ensure your treatment is both safe and effective. The first thing you need to do is shave the area you are having treated the day before your appointment. This is really important, as the follicle still needs to be visible for the laser to work. That means methods such as waxing, epilating, or plucking will render the treatment ineffective. Shaving the day before also helps to mitigate any irritation. "The skin can become irritated after shaving, so we recommend shaving the skin the day before to reduce any irritation," says Smith. "On the day itself, we ask that you don't wear any body lotion, oils or creams on the area, as it can cause an adverse reaction." The same goes for things like deodorant if you're having your underarms done or any skincare or makeup if you're having laser hair removal on your face. You also want to make sure that you avoid any form of sun or UV exposure during your treatment. If you are planning on being in the sun or going away on holiday, it's advisable to wait at least two weeks after your sun exposure has finished before returning to treatment and avoiding treatment at least two weeks before you jet away too. If you use self-tan, you also want to ensure that this is completely removed from your skin prior to your treatment. This is because the laser can pick up the pigment from the tan and cause scarring, so this is an important factor to remember.It's also advisable to postpone any heavy workouts, saunas, or hot showers or baths before your treatment and immediately afterward. This is because the additional body heat can contribute to inflammation with the laser treatment. And it's for this reason that Smith advises wearing loose clothing for the rest of the day after your treatment and using Laser Clinics Institut Laser Aid for around five days afterwards, which helps to draw out the heat from the skin and reduce any post-treatment irritation or itchiness.If you're having laser hair removal on your face, then you'll also want to religiously apply SPF (and regularly top up) to protect your skin and avoid any actives such as exfoliating acids or retinoids (such as retinol or retinal) in the days leading up to and the days after your treatment.How much does laser hair removal cost?Prices will vary regionally, from clinic to clinic, from body area to body area, and depending on how many sessions you require. Many clinics also offer packages which can make the treatment more cost-effective if you're planning to have more than one area treated. My initial treatment for full legs at the Brighton Laser Clinics branch would cost around \$816 for 10 sessions. However, smaller areas such as the lip and chin together will cost around \$226 for 10 sessions, and a full Hollywood would cost \$377 for 10 sessions.My laser hair removal review:I'm currently halfway through my laser hair removal treatment on my legs at Brighton Laser Clinics, and I'm seeing drastic results already.Even though I'm still undergoing my laser hair removal treatment on my legs, I have to say it's the one treatment that I wish I had done years ago. As someone who finds shaving a big chore and expense, I've been delighted at the results I've had at just halfway through my treatment. After my fourth treatment, I've noticed that I no longer have quite so many black dots on my skin after I shave, and I can get away with shaving once or twice a week now rather than every day. Any hair that does grow back takes ages to surface. Not having to shave all of the time means my routine is far quicker—and it's one less thing I have to think about doing.As for the treatment at Brighton's Laser Clinics, I was surprised at just how fast the treatment is. Both of my legs were treated in just 20 minutes (smaller areas like the lip and chin take less than five minutes), so you can be in and out quickly without it taking up a whole morning or afternoon. In fact, I've been so impressed with the results I've had so far that I've decided to have my bikini line, upper lip, and chin treated too.The only downside is that laser hair removal is both an investment and a process which spans almost a whole year, but I can tell you that it's absolutely worth it for the freedom of not having to worry about removing my hair. Plus, when you think about the cost of buying razors or booking in for waxes, it actually makes a smart investment if you want to significantly reduce hair growth.I'll report back to my fur results once my treatment is complete, but I'd recommend a laser hair removal treatment at Laser Clinics to anyone who wants to reduce body hair while being treated within a professionally yet friendly clinic.Shop products to prepare for laser hair removal.This post originally appeared on Who What Wear UK. GentleLase is a popular laser treatment that offers an effective solution for various skin concerns. Patient reviews from the United Kingdom have shown positive results in treating hair removal, pigmentation, vascular lesions, and skin rejuvenation. This article will delve into the details of what GentleLase is, what it can achieve, what's included in the treatment, its pros and cons, cost, ideal candidates, preparation, procedure steps, duration of effects, safety, recovery, and more. What is GentleLase and What Can It Achieve? GentleLase is a medical-grade laser treatment that utilizes a unique laser technology to target specific skin concerns. It can effectively treat unwanted hair, hyperpigmentation, sunspots, age spots, facial veins, and improve overall skin texture and tone. The laser energy specifically targets the pigmented areas or hair follicles, leaving the surrounding skin unharmed. Patients have experienced significant reduction in unwanted hair growth, improved skin tone, reduced pigmentation, and visible reduction in vascular lesions after undergoing GentleLase treatments. What's Included in GentleLase Treatment? GentleLase treatments usually include a consultation with a trained professional who will assess your skin concerns, advise on the number of sessions required, and tailor a treatment plan suitable for your goals. The treatment itself involves the use of a handheld device that emits laser energy onto the targeted areas. The procedure is relatively quick and can be performed in a clinic or medical spa setting. Pros and Cons of GentleLase Pros: Effective in treating various skin concerns Minimal discomfort during the procedure No downtime, allowing patients to resume normal activities immediately Long-lasting results Safe for most skin types Cons: May require multiple sessions for optimal results Can cause temporary redness or swelling in the treated area Not suitable for individuals with certain medical conditions Cost of GentleLase Treatment The cost of GentleLase treatment in the United Kingdom may vary depending on the size of the treated area, the number of sessions required, and the location of the clinic. On average, prices range from £ 135 to £ 500 per session. It is recommended to consult with a professional to determine the exact cost based on your specific requirements. Who's a Good Candidate for GentleLase? GentleLase is suitable for individuals looking to address unwanted hair, hyperpigmentation, sunspots, age spots, or facial veins. Most skin types can benefit from GentleLase treatment, but it is essential to consult with a professional who can evaluate the individual's skin condition and medical history to ensure suitability. Is GentleLase Worth It? Based on the positive patient reviews and its effectiveness in treating various skin concerns, GentleLase is considered a worthwhile investment. The treatment offers long-lasting results and can greatly improve the appearance and texture of the skin. However, it is crucial to have realistic expectations and follow the recommended treatment plan for optimal results. How to Prepare for GentleLase Treatment Prior to undergoing GentleLase treatment, it is essential to avoid excessive sun exposure and tanning beds. It is also advisable to shave the treatment area before the procedure. Additionally, any skincare products containing retinoids or acids should be stopped a few days before the treatment. A consultation with a professional will provide specific instructions tailored to individual needs. How Does GentleLase Work? GentleLase works by emitting a concentrated beam of laser energy that is absorbed by the targeted pigmented cells or hair follicles. The heat generated by the laser destroys the cells, inhibiting hair growth or improving pigmentation. The surrounding skin remains unaffected, minimizing the risk of damage or side effects. Procedure Steps and Duration The GentleLase procedure typically involves the following steps: Cleansing of the treatment area Application of a cooling gel or anesthetic cream (if necessary) Placement of protective eyewear for the patient and the professional Application of laser pulses on the targeted areas Cooling of the treated skin with a cold compress or cooling device The duration of the procedure may vary depending on the size of the treated area. However, most sessions can be completed within 30 minutes to an hour. Duration of Effects After undergoing GentleLase treatment, patients can experience immediate improvement in skin texture and a reduction in hair growth, pigmentation, or vascular lesions. The long-term effects can last for several months to years, depending on the individual and the treated area. Follow-up sessions may be recommended to maintain the desired results. Is GentleLase Safe? GentleLase treatment is considered safe when performed by a trained professional. The technology used in GentleLase is FDA-approved and has been extensively tested for its safety and efficacy. However, like any cosmetic procedure, there is a slight risk of temporary redness, swelling, or changes in pigmentation. It is vital to follow post-treatment care instructions provided by the professional. When Will You See Results and How's the Recovery? Results from GentleLase treatment can be seen immediately, with further improvement over time as the skin continues to produce collagen and heal. Some patients may experience mild redness or swelling, which usually subsides within a few hours. Minimal to no downtime is associated with the treatment, allowing individuals to resume normal activities immediately. Frequently Asked Questions (FAQs) 1. How many sessions of GentleLase are required for optimal results? Depending on the individual and the treated area, multiple sessions (usually between 4-8) may be required to achieve the desired results. 2. Can GentleLase be performed on all skin types? GentleLase is safe for most skin types, but it is essential to consult with a professional to determine the treatment's suitability for specific skin conditions. 3. Is GentleLase treatment painful? Most patients experience minimal discomfort during GentleLase treatment. The use of a cooling device or anesthetic cream can further minimize any potential discomfort. CANDELA GentleLase Pro U GentleLase Pro-U, the aesthetic industry's premier laser, is an ideal solution for hair removal, treating pigmented lesions and the treatment of vascular lesions, such as port wine stains. It's fast and loaded with advanced features that continue to deliver extraordinary results that have earned the trust of practitioners worldwide. The Gold Standard of Hair Removal - Revitalizing skin affect - Can be upgraded to GentleMax Pro - Virtually painless - Proven safety reco Device Details Distributor Candela Manufacturer Candela Model GentleLASE Pro-U Manufactured Year 2023 Specific Equipment Type Alexandrite laser and Zimmer Cryo-6 Sale Price \$27000 Treatments Performed Hair Removal, Pigmentation Handpieces and shot counts / usage 12/15/18mm handpiece, 20/22/24mm handpiece, 2.2 million pulses Wavelengths 755nm Consumables used by device None Consumables with purchase None Treatments CANDELA GentleLase Pro U Hair Removal on all skin and hair types Spider veins Telangiectasia and telangiectatic matting on the face and legs Removal of epidermal pigmented lesions Sun damaged skin Age Spots Freckles Treatment of vascular anomalies Freckles Melasma Café-au-lait Seborrheic Keratosis Permanent hair reduction on all skin types Hemangiomas Venous Lakes Blue Facial Vein Benefits of Laser Hair Removal Compared to Alternative Treatments The primary benefits of laser hair removal include: Larger areas may be treated with less discomfort than with electrolysis, waxing or tweezing The CANDELA GentleLase Pro U Plus combines speed, comfort, and long lasting results The CANDELA GentleLase Pro U Plus works on any area of the body where a hair-free appearance is desired Shaving, waxing and depilatory creams remove the hair but leave the hair follicles intact, so the hair regrows within one to four weeks in most cases. Candela GentleYAG Pro-U/Plus laser hair removal offers you a long-term reduction in both the amount of hair and also in many cases a reduction in thickness and color of hair shafts which do grow back. Hair removal methods like tweezing, waxing or sugaring which cause irritation may actually stimulate hair growth. This happens because one way the body defends itself against having hair yanked out is to produce thicker, stronger hairs which are harder to pull out next time. What areas of the body can be treated? ALL parts of the body can be treated with the Candela GentleYAG Pro-U Plus Laser Hair Removal. In women, the most common areas for treatment are upper lip, chin, bikini line, and legs, and underarms. In men, the most common are shoulders and back, and the beard area. Please contact us want to know more information. And Get the deal from us... Candela GentleLASE Near You Continuing my review of laser hair removal devices, today I will dwell in detail on a device from the company Candela. Their brandchild is called Candela GentleLase PRO-U. I will talk about the characteristics of the laser, the principle of its operation, what advantages and disadvantages it has, and why salon owners and clients choose it. I wrote about what other alexandrite lasers there are in a separate article. The result is a whole rating of laser hair removal devices. You can read it. Laser CharacteristicsCandela GentleLase PRO-U - long-wave alexandrite laser, optical-quantum device. The manufacturer tells us that this is the most efficient, fastest, most reliable, easy to use, and error-proof laser available. According to most experts, Candela GentleLase PRO-U is the ideal of quality, and for more than 10 years it has been called the gold standard in laser hair removal. I decided to find confirmation of these words, so as not to talk about it unfoundedly. Laser wavelength from 755 to 1064 nm, pulse duration from 2 to 30 ms. It is considered the fastest laser. In addition, the Candela GentleLase PRO-U device offers 2 cooling systems: air ACC (Air Cooling Compatible™) - a cooling system based on the vortex effect, the active body is placed on the axis of the handle and rotates when pressed, supplying a stream of cold air;Cryogen-based cooling DCD (Dynamic Cooling Device™) is a dynamic system that provides gradual cooling at low temperatures. Before the pulse and immediately after it, a small dose of cryogen is applied to the skin, which cools it to the desired optimal temperature. This system allows you to increase power without risk to the patient's skin. This system is unique and has a patent. Light spot size from 1.5 to 24 mm. In 1 pulse you can process 452 mm²! This significantly reduces the time of the hair removal procedure, but does not reduce the quality. Manufacturers are telling the truth when they claim that the Candela GentleLase PRO-U is the fastest laser on the planet. Its characteristics confirm this. In addition, I note that another main and important factor is the absence of the need to use gels during the procedure, which makes clients very happy. Experts also noted that the absorption of melanin by the Candela GentleLase PRO-U alexandrite laser is higher than that of the diode laser. Based on this, having compared several types of devices, I can rightfully call the Candela GentleLase PRO-U device a unique invention and one of the best lasers for medical institutions and professional beauty salons.As for other parameters and characteristics, see the table below. I tried to reflect as much information as possible. Read also: Laser tattoo removal: what you need to know about the procedureNo.Characteristic nameMeaning1.Laser typeLong pulse alexandrite2.Wavelength755 nm (1064 nm)3.Pulse duration10Hz4.Light Spot Size6,8,10,12,15,18,20,22,24 mm5.Flux density560 J/cm²6.Device size (H*W*D)107*46*69 cm7.Weight108 kg8.Cooling systemGas, air9.GlassNatural sapphire10.CryogenNFC 134a11.Cryogen spray durationInterval 10-100ms12.Duration of spraying afterInterval 0.20ms13.Delay durationInterval 3.5,10-100 ms14.Tool with air cooling device (ACCSetting a specific air flow temperature (often 0 °C)ManufacturerCandela Corporation (USA), along with Cynosure, is one of the leaders in the market of solid-state lasers - alexandrite and neodymium. The company's products have been known since 1979. Alexandrite lasers of the GentleLase series were the first approved by the FDA for use in cosmetology, and in the 21st century. Ultrasound and radiofrequency devices are also produced under the Candela brand. Candela GentleLase PRO-U laser technologyThe technology of this laser is based on the principle of selective photothermolysis. What is this, you ask? To put it in a more understandable language, it sounds like this: a laser beam of a certain length selectively acts on the structure of the hair, heating and destroying its components. The energy is absorbed by the hair follicle and melanin is destroyed. The result is the cessation of hair growth in the area that was treated. The length of the pulses is selected individually and is aimed only at hairs that are in the active growth phase. Dormant hairs are not affected during the procedure. Therefore, to completely remove and rid hair with the Candela GentleLase PRO-U laser, several sessions will be required. The skin around the hair remains undamaged during the procedures. GentleLase - 20 years in laser hair removalPublished: 03/13/2018 The legendary alexandrite laser Candela GentleLase celebrates its anniversary - 20 years in laser hair removal. This is how long it has been since the GentleLase laser received FDA approval for permanent laser hair removal, making it the world's first long-pulse alexandrite laser with a skin cooling system officially approved for hair removal procedures. Today, the majority of GentleLase users... Pros and cons of the Candela GentleLase PRO-U laserTo give a truly objective description of this device, I studied a huge amount of information from different angles. What are the advantages: The size of the light spot significantly reduces the procedure time. For comparison, treatment of the leg area will take about 25 minutes, while with another laser it takes 50 minutes; fast results thanks to increased pulse frequency and adjustable wavelength. After two sessions, hair is reduced by 80% on the face and 60% on the body; Removes hair of any shade and thickness. People say this is a laser for "white people". It is believed that a diode laser can only cope with hairs on dark, dark skin. There are no barriers for the Candela GentleLase PRO-U alexandrite laser: The unique cooling system eliminates painful sensations, so that any client does not experience them, even those with a low pain threshold. This system also protects against overheating; does not leave irritation or burns; no recovery required after the procedure;The procedure has a rejuvenating effect due to the wavelength, it affects not only melanin, but also collagen and water. When exposed to them, small wrinkles are smoothed out, the regeneration process starts; the ability to treat areas with hypersensitive skin;dynamic cooling system allows you to cool the skin almost instantly;the air cooling system is adjusted individually to the sensitivity of each client, cooling in the most inaccessible places;Both cooling systems are as ergonomic as possible.The benefits are perfect. What I highlighted from the shortcomings: you need to cut your hair before the procedure with a razor a month before the procedure, do not use wax, chemical hair removal products and avoid sugaring;after the procedure, herpes may break out;high cost of ownership due to gas cooling, changing cylinders is required frequently; one cylinder is consumed for a small number of procedures;the quality of the cryogen must be high, otherwise it will lead to expensive equipment repairs;risk cold burns;the air system is noisy; when the aesthetic desire of the patient to get rid of the problems that concern him, associated with unwanted hair on the face or body. The CANDELA device is an effective solution to such problems as: hypertrichosis;hirsutism;ingrown hair.Reviews from clients and craftsmenDespite the unique technology of the Candela GentleLase PRO-U laser with dual cooling system, some clients report pain after the procedure. In general, I can say that clients are satisfied with the result and the owners are satisfied with the purchase. This is a premium device. For some clients, it is important that the procedure be done on it. It is especially popular among people with high incomes. Trusya, Uraina, gives 5 starsAmong the advantages, I will highlight a good result for a long time, and among the disadvantages, it is expensive. I had the procedure done for the first time in 2014 before going on vacation. A friend recommended laser hair removal. They did it in the salon using a Candela GentleLase PRO-U laser. The skin was red for several hours after the procedure, but the procedure itself was fairly quick and painless. It feels like being bitten by a mosquito. The specialist suggests applying an anesthetic cream, but I did not use it. For a week after the procedure, I moisturized my skin abundantly. After the third procedure, a year has passed, there are practically no hairs. To get rid of it forever you will need 6-7 procedures. Smooth skin for a long time in my case. Ailsa, Moscow, gives 4.5 starsEffectiveness was noted after the first procedure. The disadvantage is discomfort. I'm happy with the result. I have medium hair. After 4 procedures there was practically no hair left. Natalya, master, Moscow, gives 4.5 starsThis is a very good device, it really produces results. Some clients complain of pain. This is understandable: the higher the power, the more painful the procedure will be. Everything is compensated by the result. The legendary Gentle series is 22 years oldPublished: 03/27/2020 Today, March 27, 2022, the legendary Gentle series celebrates its next birthday. 22 years ago, the first device in this series was sold - the GentleLase alexandrite laser, which, thanks to its exceptional reliability and unsurpassed efficiency, became the standard of quality and the "gold standard" of laser hair removal. Regardless of the time of year and skin phototype, Gentle laser hair removal is suitable for you. Only... What is the equipment used for? The model is considered a standard of quality - they strive to equip beauty salons, cosmetology and medical clinics with equipment. This is a universal solution that can solve several problems: Removal of excess hair on the body and face;Working with pigment spots and signs of aging;Intensive rejuvenation of the skin.If we talk about the effect on the skin, the laser normalizes metabolic processes and initiates the natural production of collagen, which provides lifting without the use of cosmetics. Moreover, the use of technology does not require long-term rehabilitation - the patient can enjoy life immediately after the procedure. To achieve the desired result, it is enough to follow the recommendations prescribed by your cosmetologist.
